**DETAILED ACTION**

***Election/Restrictions***

1. Claim 15 is withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in Paper No. 5.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 1754

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1-4 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zhang et al. "Study of Resistance Against Photorefractive Light-Induced Scattering in LiNbO<sub>3</sub>: Fe, Mg Crystals".

Zhang et al. discloses a LiNbO<sub>3</sub>: Fe, Mg crystal, which may be utilized in optical processing, dynamic holography techniques (an optical storage material). Zhang et al. continues to disclose wherein M is Mg, Zn, or In. Zhang et al. continues to disclose wherein the Mg concentration is 4.6 mol%. Since, Zhang et al. teaches LiNbO<sub>3</sub>, it would have been obvious to one of ordinary skill in the art to meet the stoichiometric values of the congruent composition as well as the mole percentage of Zn and In, because Zhang et al. clearly teaches wherein a LiNbO<sub>3</sub>: Fe composition is doped with magnesium, indium or zinc as a three-dimensional optical storage material, and wherein the Mg mole ratio is at least 4.6 mol%.
